

Linux how to use VPN

get **Clash** from HILAB 627 NAS

```
tar -zxvf Clash.for.Windows-0.20.37-x64-linux.tar.gz
cd Clash
./cfw
```

download URL here

but the bash will get you annoyed, so write the desktop

```
cd /usr/share/applications
touch clash.desktop
```

```
[Desktop Entry]

Name = Clash

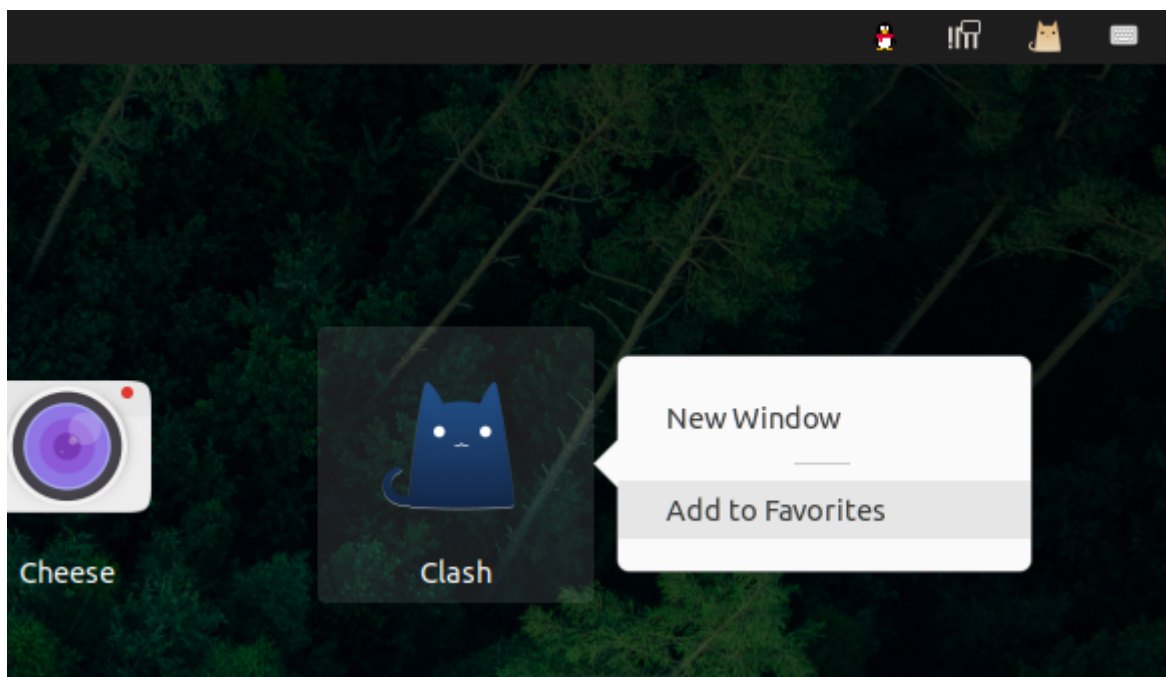

Exec = /home/hilab/utils/clash/cfw

Icon = /usr/share/applications/clash_logo.png

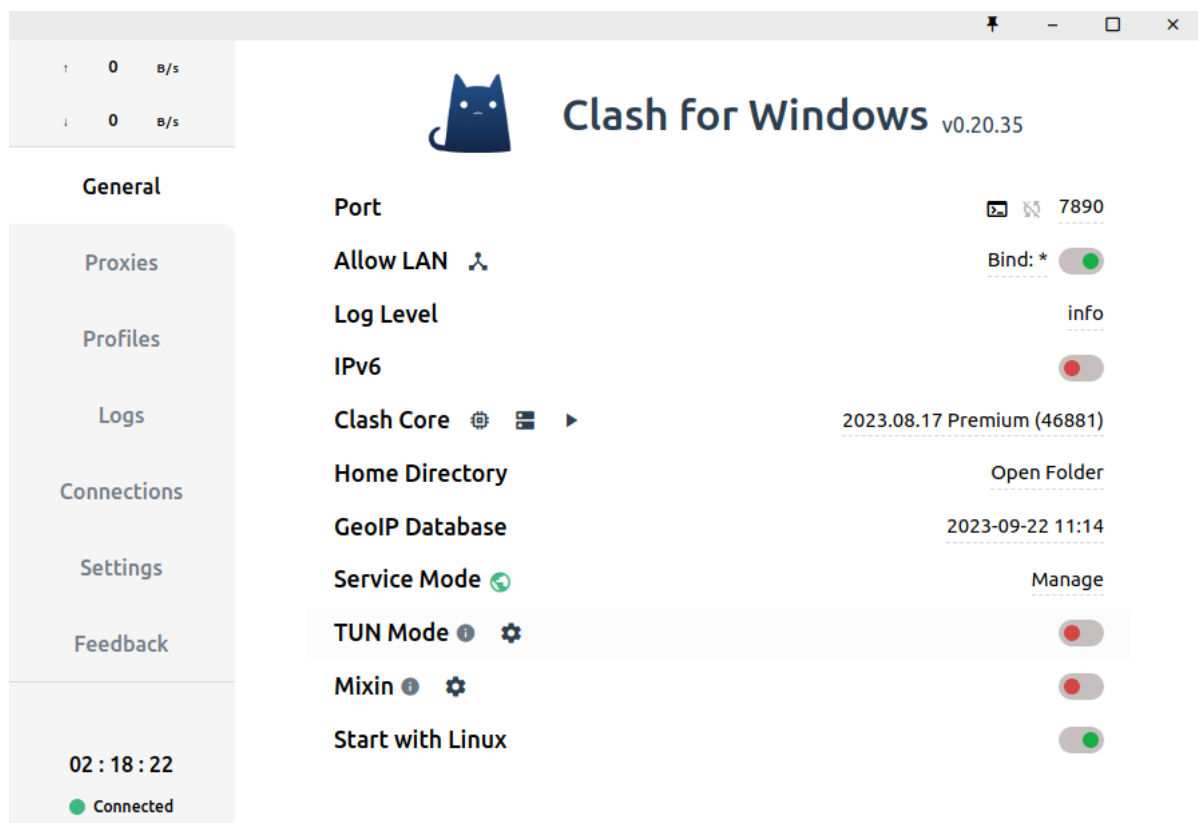

Terminal =false

Type = Application
```

Done!

you can enable **ALLOW LAN** to share host proxy in local network

update `~/.bashrc` in the **remote device** if you want to use host proxy in terminal

```
proxy_http=http://<host ip>:7890  
proxy_https=http://<host ip>:7890
```
